

LSLOT EXPANSION CARD FOR AURORA CONVERTERS

PRODUCT INTRODUCTION

The **LT-USB** is an LSlot interface for the **Aurora 8** and **Aurora 16** A/D D/A converters that provides digital input and output to desktop and portable computers using USB 2.0 ports. Both Mac and Windows computers are supported. Ideal for quick connect and portable applications, the LT-USB allows up to 16 input and output channels at up to 96 kHz, and 8 channels at 192 kHz. When used with popular recording, audio production and mastering applications, the LT-USB allows Aurora's compact size to be an integral part of a compact mobile studio.

KEY SPECIFICATIONS AND FEATURES

- One USB Device port, using USB 2.0 protocol
- Audio class compliant USB 2.0 high speed card
- Supports 16 I/O channels at 96 kHz on Aurora 16 models, bidirectional.
- Supports 8 I/O channels at 192 kHz on Aurora 8 models, bidirectional.
