

Type: Hilo as Monitor Controller

Description: With three separate Analog stereo outputs, Hilo can function as a handy Monitor Controller, to allow easy switching between two or even three sets of speakers. You can even compare different mixes by sending them out different USB channels from your DAW and selecting these channels from Hilo's touch screen.

Inputs: Build your mix in your DAW application and use channels 1&2 Out of the AES16, connecting to Hilo AES IN.

Outputs: Use the LINE OUT LEFT and RIGHT for your main monitor speakers. Use MONITOR OUT L&R for your secondary monitors. The PHONES OUT on the front panel can be used for headphones or a third set of monitors.
